

Features and Benefits

- The control circuit and the LED share the only power source.
- The working current of each channel is 5mA.
- Control circuit and RGB chip are integrated in a package of 5050 components, to form a complete addressable pixel.
- Built-in signal reshaping circuit, after wave reshaping to the next driver, ensure wave-form distortion not accumulate.
- Built-in electric reset circuit and power lost reset circuit.
- Each pixel of the three primary color can achieve 256 brightness display, completed 16777216 color full color display, and scan frequency is of 2KHz.
- Cascading port transmission signal by single line.
- Any two point the distance not more than 5m transmission signal without any increase circuit.
- When the refresh rate is 30fps, the cascade numbers are more than 1024 pixels.
- Send data at speeds of 800Kbps.
- The color of the light is highly consistent, cost-effective..

Applications

- Full-color module, LED full-color soft/hard light bar, LED guardrail tube.
- LED decorative lighting, LED Screen, Indoor/outdoor LED video irregular screen, various electronic products, electrical equipment marquee.

General description

WS2812C is a intelligent control LED light source that the control circuit and RGB chip are integrated in a package of 5050 components. It internal include intelligent digital port data latch and signal reshaping amplification drive circuit. Also include a precision internal oscillator and a voltage programmable constant current control part, effectively ensuring the pixel point light color height consistent.

The data transfer protocol use single NZR communication mode. After the pixel power-on reset, the DIN port receive data from controller, the first pixel collect initial 24bit data then sent to the internal data latch, the other data which reshaping by the internal signal reshaping amplification circuit sent to the next cascade pixel through the DO port. After transmission for each pixel, the signal to reduce 24bit. pixel adopt auto reshaping transmit technology, making the pixel cascade number is not limited the signal transmission, only depend on the speed of signal transmission.

RESET time > **280μs**, it won't cause wrong reset while interruption, it supports the lower frequency and inexpensive MCU.

Refresh Frequency updates to **2KHz**, Low Frame Frequency and No Flicker appear in HD Video Camera, it improve excellent display effect.

LED with low driving voltage, environmental protection and energy saving, high brightness, scattering angle is large, good consistency, low power, long life and other advantages. The control chip integrated in LED above becoming more simple circuit, small volume, convenient installation.

Mechanical Dimensions

Remarks: Dimension of 5.0*5.4*1.57mm, default Tolerance of 0.05mm.

PIN Configuration

PIN Function

NO.	Symbol	PIN	Function description
1	VDD	POWER SUPPLY	Power supply
2	DOUT	DATA OUT	Control data signal output
3	VSS	GROUND	Ground,data & power grounding
4	DIN	DATA IN	Control data signal input

Absolute Maximum Ratings

Parameter	Symbol	Ratings	Unit
Power supply voltage	V_{DD}	+3.7~+5.3	V
Logical Input Voltage	V_I	VDD+0.7~VDD+0.7	V
Operation junction temperature	T_{opt}	-25~+65	°C
Storage temperature range	T_{stg}	-40~+85	°C

Electrical Characteristics ($T_A=25^{\circ}\text{C}$, $V_{DD}=5\text{V}$, $V_{SS}=0\text{V}$, unless otherwise specified)

Parameter	Symbol	Min	Tpy	Max	Unit	Conditions
Input current	I_I	—	—	± 1	μA	$V_I=V_{DD}/V_{SS}$
High Voltage Input	V_{IH}	$0.7V_{DD}$	—	—	V	D_{IN} , SET
Low Voltage Input	V_{IL}	—	—	$0.3V_{DD}$	V	D_{IN} , SET
Hysteresis Voltage	V_H	—	0.35	—	V	D_{IN} , SET

Switching Characteristics ($T_A=25^{\circ}\text{C}$, $V_{DD}=5\text{V}$, $V_{SS}=0\text{V}$, unless otherwise specified)

Parameter	Symbol	Min	Tpy	Max	Unit	Condition
Transmission delay time	t_{PLZ}	—	—	300	ns	$CL=15\text{pF}$, $D_{IN} \rightarrow D_{OUT}$, $RL=10\text{K}\Omega$
Fall time	t_{THZ}	—	—	120	μs	$CL=300\text{pF}$, $OUTR/OUTG/OUTB$
Input capacity	C_I	—	—	15	pF	—

LED Characteristics

Parameter	Symbol	Color	Quiescent Current: 0.6mA				Condition (Working current)
			Mini	Tpy	Max	Unit	
Brightness	IV	Red	150	--	200	mcd	5mA
		Green	400	--	600		
		Blue	100	--	150		
Wavelength	λ_d	Red	620	--	630	nm	5mA
		Green	515	--	525		
		Blue	465	--	475		

Data Transfer Time

T0H	0 code, high voltage time	220ns~380ns
T1H	1 code, high voltage time	580ns~1 μs
T0L	0 code, low voltage time	580ns~1 μs
T1L	1 code, low voltage time	580ns~1μs
RES	Frame unit, low voltage time	>280 μs

Sequence Chart

Cascade Method

Data Transmission Method

Note: The data of D1 is send by MCU, and D2, D3, D4 through pixel internal reshaping amplification to transmit.

Composition of 24bit Data

G7	G6	G5	G4	G3	G2	G1	G0	R7	R6	R5	R4	R3	R2	R1	R0	B7	B6	B5	B4	B3	B2	B1	B0
----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----

Note: Data transmit in order of GRB, high bit data at first.

Typical Application Circuit:

Remarks: C1 is the filter capacitor for VDD, its value of 100nF.

Packing Standard

Top SMD LED Using Instructions

1. Summary

To make the best use of WORLDSEMI’s LED, please refer to the below precautions, they are of same usage method as other electronic components.

2. Cautions

2.1. Dust & Cleaning

The surface of the LED is encapsulated with modified epoxy resin because it plays a very good role in protecting the optical performance and aging resistance. The modified epoxy resin is easy to stick with dust and must be kept clean. When there’s a certain amount of dust on the surface of the LED, it won’t affect brightness, but dust proof should be taken care of. Promoting the use of unsealed package in preference to others and the assembled LEDs should be placed in a clean container.

Avoid using the organic solvents to clean the dust on the LED surface and it’s necessary to confirm whether the cleaning fluid will dissolve the LED.

Do not clean the LEDs by the ultrasonic. Some parameters affecting the LED performance must be evaluated if have no alternative but to the ultrasonic cleaning method, such as ultrasonic power, baking time and assembly conditions, etc.

2.2. Moisture-proof packaging

TOP SMD LEDs are moisture sensitive components. LEDs are packaged in aluminum foil bag to prevent the from absorbing moisture during transport and storage. A desiccant is placed in the bags to absorb moisture. If the LED absorbs moisture, then it evaporates and expands when in reflow process, which may break the colloid from the bracket and damage the optical performance of LED. For this reason, moisture-proof packaging is to prevent the from absorbing moisture during transport and storage. The moisture resistance rating of WORLDSEMI’s LED is: **LEVEL 5a.**

Tabel I - IPC/JEDEC J-STD-020 Moisture/Reflow Sensitivity Classification

MSL Level	Workshop Life	
	Time	Conditions
LEVEL1	Unlimited	≤30°C/85%RH
LEVEL2	1 Year	<30°C/60%RH
LEVEL2a	4 Weeks	≤30°C/60%RH
LEVEL3	168 Hours	≤30°C/60%RH
LEVEL4	72 Hours	<30°C/60%RH
LEVEL5	48 Hours	≤30°C/60%RH
LEVEL5a	24 Hours	≤30°C/60%RH
LEVEL6	Take-out and Use immediately	≤30°C/60%RH

2.3 SMT Assembly Attention Points

2.3.1 It's strong recommended to open the Vacuum plastic bag before SMT, and get the whole reel into oven to proceed dehumidification (Baking condition: 70 ~ 75°C ≅ 24H).

2.3.2 Strictly controls the bareness time within 24 hours of LED in air, which completes the action of assembly between opening sealed bag to high-temperature reflow soldering (Operating condition: T<30°C, RH<60%).

2.3.3 After printing the LEDs on PCBA with solder paste, please finish reflow soldering no more than 1 hour.

2.3.4 If the bulk LEDs are exposed to the air for long time, including but not limited to unpacked bulk LED, production residues, and machine throwings and the maintain materials and so on, please proceed dehumidification before next high-temperature assembly (Operating condition: Whole reels 70 ~ 75°C ≅ 24H, or bulk LEDs 120°C*4H).

3. SMT Reflow

Refer to the parameters listed below, the experimental results prove that the TOP SMD LED meets the JEDEC J-STD-020C standards. As a general guideline, it is recommended to follow the SMT reflow temperature curve recommended by the solder paste manufacturer.

Curve Description	Lead-free
30°C ~ 150°C preheating slope	1~4 °C/s
30°C ~ 150°C preheating time	60~120 s
150°C to 200°C constant temperature slope	0~3 °C/s
150°C ~ 200°C constant temperature time	60~120 s
LIQUID REGION temperature (TL)	217°C
Peak Temperature (Tp)	245°C
Reflow slopeTime (tp)	0~3 °C/s
Reflow soldering time	45-90 s
Cooling Rate	-4~0 °C/s
Room Temperature to Peak Holding Time	<6 min

Remarks: 1. These general guidelines may not apply to all PCB designs and reflow soldering configurations.

2. All temperatures referred are measured on the surface of the package body.

4. Assembly Precautions

1. Clip the LED from its side.	2. Neither directly touch the gel surface with the hand or sharp instrument, it may damage its internal circuit.	3. Not to be double stacked, it may damage its internal circuit.	4. Can not be stored in or applied in the acidic sites of PH<7.
